Our DD Squirrel 67 is only a few millimeters larger than the Squirrel 61, but its longer diving lip lets it dive to over 2m. Ideal, if the predators in lower regions are hunting small prey fish. All the other positive qualities of the Squirrel family are built-in, it's a perfect suspender that imitates panicky escapes as you twitch the loose line. Of course, in clear water, it can be speeded up without getting out of balance and many perch snap, because there was no time to think.
