Illex Bonnie 107 lure - The ideal surface lure for versatile applications

The Illex Bonnie 107 lure is a highly specialised surface lure that was originally developed for fishing for peacock bass and aimara in Brazil. Now available in Europe, this 10.7cm long, 17.5g lure offers impressive versatility and performance. Whether you're targeting sea bass, black bass, pike, asp or even tropical species such as tarpon and mackerel, the Illex Bonnie 107 lure delivers excellent results.

Excellent casting properties and stable running

Thanks to the integrated tungsten beads, the Illex Bonnie ensures outstanding casting performance and produces deep, tantalising vibrations that predatory fish find irresistible. The lure is equipped with an innovative chamber system that optimises the balance and ensures that the bait remains stable on the water surface even in difficult conditions. This ingenious design keeps the Bonnie lure in almost perfect balance, similar to traditional wooden plugs.

- **Target fish:** sea bass, black bass, perch, pike, asp, tarpon, mackerel, peacock bass and aimara
- **Length:** 10,7 cm
- **Weight:** 17,5 g
- **Swimming behaviour:** Floating
