This new generation pencil bait has an innovative lip angle that generates erratic darting movements typical of a fleeing prey fish. The best way to work this lure is a straight retrieve. The lure will break the surface on faster retrieves or can be fished sub-surface on slower more controlled retrieves. Designed primarily as a bass lure for Japanese waters the key to the development of the RISERBAIT concept was recreating the action of a startled fish darting upwards towards the surface. A great lure for all your favourite predators-asp, perch, pike, black bass, sea bass, jack mackerel, baby tarpon. The aerodynamic body design is a real advantage in strong winds or when you need to fish at extra-long range. This is an essential lure for accurate distance angling from shore or boat targeting sea or freshwater species.
