Salmo Executor Lure Crankbait

Executor is a classic, a beautiful shape and unique action. Well proved on all types of fisheries – from small streams to large lakes and reservoirs. The growing number of colours allows every fan of classic crankbaits to find the perfect fishing partner. Don't leave home without one!

The Executor is the wobbler you need to make your catch. With its deep running behaviour and through-wire construction, it will attract and hold any fish. The polycarbonate lip provides a realistic swimming action and the high quality VMC trebles guarantee durability. Every single plug is hand-tested to ensure the best quality.

Executor is a typical crankbait. Plastic lip creates the diving of the lure and its characteristic, energetic action. It is characterised by medium, not very strong tail action and strong 'blinking' action. Such an action proved to be extremely successful and, on many occasions, is much better than others.

How to fish with Salmo Minnow

The standard method for lake fishing is to retrieve with varying speed, allowing the Executor to rise close to the surface occasionally. For trolling the best version is the shallow runner with a weight placed 0.8-1.2m in front of the lure on a paternoster link. Also trolling with flat-line is very effective. Specially in case of the bigger Executors – 9 and 12. In large rivers a well-proven method is to cast across the current or downstream and to retrieve the lure slowly. For small streams it is best to cast upstream and the Executor 5SR is the perfect lure for this.

- Available versions: Deep Runner (SDR)

- Deadly effective colours
- Through-wire construction
- Polycarbonate lip
- Individually Hand Tuned and Tank Tested
- Premium Black Nickel VMC Hooks
