

# Delphin Atoma Feedcase Fishingbag

Delphin

Product number: DLP-AFA

A unique bag designed specially designed for storing and transporting feeder cages.

Weight: 0.557 kg  
28,99 €\* 28,99 €

This robust bag is ideal for transporting and storing fishing accessories such as feeding baskets and fishing leads. Thanks to the sturdy and heavily padded walls, you can safely store and transport a large amount of food baskets or leads.

The interior of the container is divided into four compartments, which are all connected by Velcro fasteners. However, these compartments are also removable and movable so that you can adapt the interior perfectly to your needs. The division into compartments allows you to store your fishing accessories in a clear and orderly manner, making it easier to find the items you need.

On the inside of the lid is a spacious mesh pocket where you can store other fishing utensils or documents. This pocket is also secured with a Velcro fastener to prevent the contents from slipping.

The high-quality zips with plastic pull-outs make it easy to open and close the bag and are durable and robust. The EVA foam handle on the top of the bag ensures comfortable and safe transport and prevents the bag from tipping over and the possible mixing of the contents.

The specific design of this product is ensured by the burgundy colour of the lid, which is characteristic of our specially designed feeder products. With dimensions of 30x20x10cm and an inner pocket size of 29x19cm, the container offers enough space for a variety of fishing accessories. Overall, this is an essential accessory for any keen angler who wants to store and transport their fishing accessories in a safe and organised way.
