Delphin Boom FDR-T Anti-Tangle Feeder Tubes - Perfect solution against tangles

Features and advantages

- **High-quality plastic:** The Anti-Tangle is made of plastic, which is characterised by excellent elasticity and sufficient rigidity. This combination makes it ideal for use in very cold water without damaging the material.
- **Anti-tangle technology:** The anti-tangle boom is equipped with a snap hook that moves on a spring steel ring. This allows the basket to rotate around the tube axis and effectively prevents tangling of the rig.
- **Soft plastic stops:** There are soft plastic stops at both ends of the anti-tangle boom. These protect the knots so that no additional rubber beads are required.
- **High flexibility and load-bearing capacity:** The Anti-Tangle is characterised by its high flexibility, which results in an impressive load-bearing capacity and therefore also enables larger catches.
- **Practical packaging unit:** Each pack contains 5 pieces so that you always have enough replacements to hand.

Areas of application

The Delphin Boom FDR-T Anti-Tangle Tubes is ideal for anglers who bottom fish in different waters and weather conditions. It offers a reliable solution against tangles and ensures undisturbed fishing enjoyment.

Why Delphin Boom FDR-T?

- Avoid tangles and save valuable time when fishing.
